DETAILED ACTION

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11-12, and 24-26 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Winnik et al. (US-794) for the reasons of record and further in view of the following remarks.

Applicant's response filed 12/14/05 has been fully considered but are not found to be persuasive. Firstly, applicant urges the alkyl (meth)acrylate does not meet the instant convertible moiety in hydrophobic form because it does not contain a long side chain acid group as describe

Art Unit: 1713

in applicant's specification. The examiner disagrees because prior art alkyl portion of the (meth)acrylate monomer is hydrophobic, and the alkyl (meth)acrylates disclosed are capable of being converted into hydrophilic form in the resultant composition. The specific long side chain convertible moiety feature upon which applicant relies is not recited in the rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. Secondly, applicant asserts that the dye colorant of Winnik et al. differs from the recited pigment colorants in claim 11, and further argue that claim 11 do not require the colorant to be attached to the polymer. The examiner wishes to point out that the present claim does not exclude prior art covalent attachment, but recites a mixture of various components. Winnik et al. further teach a developer composition embodiment containing flow enhancing additives, incorporated by reference in US 3,720,617 and US 3,983,045 (col. 7, lines 31-49), wherein pigment or dye are taught to be art-recognized colorant equivalents for toner particles (see US-617, col. 9, lines 32-53; US-045, col. 5, lines 36-59). Accordingly, one having ordinary skill in the art would have readily envisaged using dye or pigment colorant

Art Unit: 1713

in a toner composition, in light of their being taught as suitable colorant equivalents in the toner art by patentees. The selection of a dye or a pigment colorant in a toner composition would be within the level of ordinary skill in the art. Accordingly, the examiner's position is maintained.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
